## Test Case Results for Each Test Object (without Coverage)

The table above shows each test object on the x axis and the number of test cases of the respective test object on the y axis. Each bar is divided into passed, not executed and failed test cases. The test case results do not take into account any coverage result (i.e. if all test cases of a test object are passed in this table but the coverage is failed, the overall test object result will be failed).

## Statement (C0) Coverage: Total Statements for Each Test Object

The table above shows each test object on the x axis and the number of statements of the respective test object on the y axis. Each bar is divided into reached statements (i.e. statements that have been executed during the test) and unreached statements.

## Branch (C1) Coverage: Total Branches for Each Test Object

The table above shows each test object on the x axis and the number of branches of the respective test object on the y axis. Each bar is divided into reached branches (i.e. branches that have been executed during the test) and unreached branches.

## Decision Coverage: Total Decision Outcomes for Each Test Object

The table above shows test objects on the x axis and the number of possible outcomes of all decisions of the respective test object on the y axis. To achieve full DC coverage, each decision must evaluate to both true and false.

Each bar is divided into reached and unreached decision outcomes.

## MC/DC Coverage: Total Condition Combinations for Each Test Object

The table above shows test objects on the x axis and the number of condition combinations of all decisions of the respective test object on the y axis. The number of condition combinations is based on the number of boolean conditions within each decision of the test object. To achieve full MC/DC coverage, each decision requires all contained atomic conditions to evaluate to both true and false independently of all other conditions. The cumulated number of rows within such tables of condition combinations is what is displayed in this table.

Each bar is divided into reached condition combinations (i.e. combinations of boolean condition values that have been executed during the test) and unreached condition combinations.

## MCC Coverage: Total Condition Combinations for Each Test Object

The table above shows test objects on the x axis and the number of condition combinations of all decisions of the respective test object on the y axis. The number of condition combinations is based on the number of boolean conditions within each decision of the test object. To achieve full MCC coverage, each decision requires all contained atomic conditions to evaluate to all possible combinations of true and false values. The cumulated number of rows within such tables of condition combinations is what is displayed in this table.

Each bar is divided into reached condition combinations (i.e. combinations of boolean condition values that have been executed during the test) and unreached condition combinations.

### Test Object List

The following table lists all test objects with their test case and coverage results. The cumulated results for modules, folders and test collections are also displayed, the indentation within the name column indicates the parent relationship of the elements.

Please note that only test objects are numbered within the first column. This number is referenced on the x axis within the overview charts for test case and coverage results available on previous pages (if included into the report).

Comments:"NOTE 1:Inline functions defined in globalmacro.h are not Unit Tested.  
NOTE 2: ""CBD\_Sandbox\_dbg.map"" map file is embedded for reference.  
NOTE 3: 100% coverage is not possible in ""DampingFirewall\_Init1"", ""DriverVelCalc"", ""ADDCoefCalc"", ""FilterCoefCalc"" and ""GenFddlcCmd"" function due to uasge of ""FPM\_Fix\_m"", ""Limit\_m"" & ""FPM\_InitFixedPoint\_m"" macro.  
  
NOTE 4:In ""GenFddlcCmd"" function, src line no.1437 is divided into 3 expressions and typecasting code is added in VBA to avoid overflow/ underflow issue.  
  
NOTE 5:In ""ADDCoefCalc"" function, out of range value is given to parameter ""VehicleLonAccel\_KphpS\_T\_f32"" in TS3.4 and TS3.5(Pathsheet) to cover conditions ""(VehicleLonAccel\_KphpS\_T\_f32>=VEHICLELONACCEL\_MAX\_F32)=True"" and ""(VehicleLonAccel\_KphpS\_T\_f32<=VEHICLELONACCEL\_MIN\_F32)=True"" respectively.  
NOTE 6:In ""ADDCoefCalc"" function, return value is going out of range but it is within specified tolerance.  
NOTE 7:In ""GenFddlcCmd"" function,return value and ""DampFWPrev2PreAttnComp\_MtrNm\_M\_s20p11"" , in function ""DampingFirewall\_Per1"" the variable ""DampFWPrev2PreAttnComp\_MtrNm\_M\_s20p11"" is going out of range but it is within specified tolerance."

Comments:"NOTE 1:Inline functions defined in globalmacro.h are not Unit Tested.  
NOTE 2: ""CBD\_Sandbox\_dbg.map"" map file is embedded for reference.  
NOTE 3: 100% coverage is not possible in ""DampingFirewall\_Init1"", ""DriverVelCalc"", ""ADDCoefCalc"", ""FilterCoefCalc"" and ""GenFddlcCmd"" function due to uasge of ""FPM\_Fix\_m"", ""Limit\_m"" & ""FPM\_InitFixedPoint\_m"" macro.  
  
NOTE 4:In ""GenFddlcCmd"" function, src line no.1437 is divided into 3 expressions and typecasting code is added in VBA to avoid overflow/ underflow issue.  
  
NOTE 5:In ""ADDCoefCalc"" function, out of range value is given to parameter ""VehicleLonAccel\_KphpS\_T\_f32"" in TS3.4 and TS3.5(Pathsheet) to cover conditions ""(VehicleLonAccel\_KphpS\_T\_f32>=VEHICLELONACCEL\_MAX\_F32)=True"" and ""(VehicleLonAccel\_KphpS\_T\_f32<=VEHICLELONACCEL\_MIN\_F32)=True"" respectively.  
NOTE 6:In ""ADDCoefCalc"" function, return value is going out of range but it is within specified tolerance.  
NOTE 7:In ""GenFddlcCmd"" function,return value and ""DampFWPrev2PreAttnComp\_MtrNm\_M\_s20p11"" , in function ""DampingFirewall\_Per1"" the variable ""DampFWPrev2PreAttnComp\_MtrNm\_M\_s20p11"" is going out of range but it is within specified tolerance."
